Sold!

By Kristen Kohli

Difficulty Level: ❺

Scenario:

Five couples purchased homes from five other couples, (including the Underwoods). One house was sold each month between March and July. The homes were of different types and sold for a variety of prices ($75000, $100000, $150000, $200000, and $250000). Using the clues provided, determine which couple purchased and sold each house, what month the house sold in, what the style of home was, and the price it sold for.

Clues:

1. The Tans sold their home for twice as much as the couple who sold the ranch the month before them, but for less than the couple who sold their home in March.
2. The Bernuccis bought their home two months before the sale of the cottage, but one month later than Mr. and Mrs. Ramirez sold their home. The home the Bernuccis bought was not the most nor the least expensive home sold.
3. The Adlers bought their home the month after the sale of the least expensive home, and the month before the Vollmers sold their home, which wasn't the Tudor.
4. The Sanders, whose home was not the log cabin, sold for half as much as the Victorian house, and sold the month after the $250,000 house.
5. The Crawfords spent less than the Eldridges and more than the Desais.

	Ramirez	Sanders	Tan	Underwood	Vollmer	March	April	May	June	July	Cottage	Log Cabin	Ranch	Tudor	Victorian	$75,000	$100,000	$150,000	$200,000	$250,000
